

MedBridge

One Photo. One Clear Picture of Everything You're Taking.

HealthTech | iQOO Hackathon 2026 — Pune Battle 02 ·

Daksh Khandelwal

Khushi Kushwah

The problem doesn't end with the prescription.

One patient. Multiple practitioners. Fragmented information streams.

Different treatments. Different sources. No single picture.
MedBridge creates one clear medication picture.

Doctor A
Allopathic prescription

Doctor B
Additional treatment

Home Remedy
Parallel care

Meet MedBridge.

Smartphone-centered. One photo transforms everything.

Photo

Capture any prescription instantly

Explain

Simple language + voice read-aloud

Organize

Clear medication timeline

Reconcile

Cross-system overlap surfaced

Not a chatbot. A multi-stage AI pipeline.

1

Vision OCR

Google Vision / Claude Vision reads raw handwriting

2

Structured Extraction

Medicine · Dosage · Frequency · Duration

3

Confidence Gate

Uncertain fields surfaced for patient confirmation

4

LLM Explanation

Plain-language explanation + voice output

AI does not silently guess. Uncertain information is always surfaced for confirmation.

Why the phone matters.

"The input already exists in the patient's hand."

Camera

Capture paper prescriptions instantly — no scanning, no manual entry

Voice

Hear explanations in Hindi or English

AI

Understand messy, handwritten medical notation

Portability

Carry one medication picture anywhere

One patient. Multiple systems. One visible picture.

The unique MedBridge capability

Allopathic + Homeopathic Log

Both systems logged in one place

Unified Timeline

Single medication and treatment picture

Disclosure Flag

"You've logged treatments addressing the same symptom from different systems. Consider mentioning this to both practitioners."

Traditional / educational information only. Not medical advice.

MedBridge explains. It never decides.

Clear boundaries for safety and trust.

✓ We Do

- Read prescriptions
- Extract information
- Organize clearly
- Explain simply
- Track medications
- Surface uncertainty
- Encourage disclosure

✗ We Don't

- Diagnose
- Prescribe
- Tell users to start / stop medication
- Replace doctors
- Make medical decisions
- Claim equivalence between systems

Explain and organize — never decide.

Built for the hackathon. Designed for real life.

30-HOUR MVP

Tech Stack

Domain insight: Access to practicing homeopathic doctor for terminology and workflow validation.
